PROFESSIONAL SUMMARY

Software Tester with practical experience in end-to-end application testing, including authentication systems, payment gateway integrations, real-time WebSocket communication, and automated invoice generation. Skilled in API validation, database testing, defect lifecycle management, and regression testing. Leveraging a strong backend foundation in Python and SQL to detect critical defects and improve system reliability. Committed to delivering stable, secure, and performance-oriented software solutions.

TECHNICAL SKILLS

- Python
- SQL
- Flask
- Firebase
- Postgres/MySQL
- Postman
- Git/GitHub
- Pandas
- Manual Testing
- Test Cases/Test Scenarios
- SDLC & STLC
- NumPy
- Functional Testing
- Regression Testing
- API Testing
- Black & White Box Testing

EDUCATION

Bachelor's of Technology – Computer Science Engineering — RGPV Bhopal
CGPA: 7.72 / 10 — Aug 2022 – May 2026

Higher Secondary (12th- PCM) — MP Board Bhopal
Percentage: 77.6 — June 2021 – May 2022

PROJECTS

DenQr – Online Food Ordering System — June 2025 – Nov 2025

- Executed end-to-end functional testing of order placement, payment processing, and receipt generation workflows.
- Designed and executed test cases for Razorpay payment integration and validated webhook responses.
- Performed API testing using Postman to verify payment status and order updates.
- Validated WebSocket-based real-time synchronization between admin and kitchen dashboards.
- Conducted regression testing after feature enhancements including live order tracking.
- Verified UPI payment flows and tested automated PDF invoice generation for data accuracy.
- Performed database validation to ensure correct storage of order and transaction data.
- Supported deployment validation testing on AWS EC2 cloud environment.

Testing Types: Functional, API, Regression, Integration, Database Testing

Complaint Management System — Feb 2025 – May 2025

- Performed functional testing of complaint registration and status management modules.
- Designed test scenarios for role-based authentication (User/Admin).
- Conducted database validation using Firebase to verify complaint data accuracy.
- Tested input validations, error handling, and system workflows.
- Documented defects with proper bug reporting format.

Testing Types: Functional, Smoke, Regression, UAT

TESTING KNOWLEDGE

- Strong understanding of SDLC & STLC processes.
- Hands-on experience in Functional, Regression, and Integration Testing.
- Designed and executed test cases covering positive, negative, and edge scenarios.
- Performed API Testing using Postman (status codes, payload validation, authentication, webhooks).
- Conducted Database Testing using SQL & Firebase to validate data integrity.
- Experience testing real-time systems (WebSocket's) and payment gateway integrations.
- Knowledge of Defect Life Cycle and structured bug reporting

CERTIFICATION

- Certification in Python Essential Program
- Certification in Cyber security Essential Program
